

Simple Interactive Piano

- A lightweight interactive piano system for Unity.
- Includes click input, physics-based interaction (VR / collider), and full 88-key audio support.

Features

- 88-key piano (white & black keys)
- Mouse click input support
- Physics-based interaction (VR / collider)
- Toggleable input system via PianoController
- Smooth key press animation
- Configurable fade-out audio
- Centralized control via PianoController

Included

- Piano_Interactive (Fully functional piano)
- Piano_Static (Visual only)
- Piano_Static_Collider (Physical blocking version)
- Piano_Controller
- TestHand (Demo input object)
- Demo_Scene

How to Use

1. Drag Piano_Interactive into your scene
2. Press Play and interact:
 - Mouse click → play notes
 - Collider with tag Finger → trigger notes

Input Settings

You can control input behavior from Piano_Controller:

- Enable Click Input → mouse interaction
- Enable Physics Input → collider-based interaction

Audio

- Place audio clips inside:

Resources/Piano/

- Supported naming format:

A0, A#0, B0, C1, C#1 ... C8

*Default volume is set lower for comfort. Adjust via PianoController if needed.

Demo Notes

- TestHand is a simple demo object for testing trigger-based interaction
- It is not a full physics-based hand controller

- It uses a kinematic Rigidbody and may pass through objects depending on setup
- For physics interaction, objects should have:
 - A Collider
 - A Rigidbody (recommended for consistent trigger detection)
 - Tag set to Finger
- 👉 For production use, replace it with your own controller or hand system

📦 Static Versions

- Piano_Static → visual only (no interaction, no collider)
- Piano_Static_Collider → includes colliders for physical blocking

⚠️ Important

- Interactive keys use Trigger Colliders
- Objects will pass through keys by design
- For physical blocking, use Piano_Static_Collider

🎮 Input System Compatibility

- Compatible with both Legacy Input System and New Input System
- Demo input (TestHand) works without requiring changes to Player Settings
